A wide selection of colours are available

Chain Mechanism

Tab and Ring

Wide range of trims available

Features

The Roller blind combines all the functions you could ask for in a window treatment. Practical and functional, the Roller blind will fit into and enhance any décor.

You can select from a wide range of traditional fabrics that offer an almost endless selection of colour and texture, or you can consider our broad range of Sunscreen fabrics. Sunscreen fabrics suit most modern décor and have excellent UV ratings which enable you to protect your furnishings while still being able to retain your view through the blind. In addition to the wide range of fabrics available, you can also select from a large range of base trims to suit your individual style.

Operation

Traditionally Roller blinds are operated by a spring roller and controlled by a tassel or ring pull on the base of the blind. Our Sunscreen blinds use a colour coordinated chain mechanism which if required can also be used with our other Roller blind fabric ranges.

Safety

The chain driven blind has a chain tensioner provided to conform to Australian Safety Standards.
